

# **Eisschmelze in der Arktis – droht der Weltuntergang ?**

written by K.e.puls | 12. September 2012

*Das arktische Eis hatte seit einem Sommer-Minimum 2007 wieder zugelegt, bis 2011 ;*

*Jetzt – im Sommer 2012 – gab/gibt es "endlich" wieder ein neues Minimum.*

*Bei den Alarmisten bricht nun ein nahezu "hysterischer Jubel" aus: Endlich sind sie mal wieder in den Medien mit "Weltuntergangs-Schlagzeilen".*

***D a z u    i s t   a n z u m e r k e n :***

***(1) Es sollte doch auch den "naivsten" Zeitungs-Schreibern einleuchten (offenbar leider nicht!), daß dafür weder die mäßige säkulare Erderwärmung von 0,7 Grad noch die seit 14 Jahren abnehmenden Global-Temperaturen verantwortlich sein können :***

## Global average temperature 1850-2011

Based on Brohan et al. 2006

Met Office Hadley Centre

## Abbildung Global-Temperatur

(Quelle:

<http://www.metoffice.gov.uk/hadobs/hadcru3/diagnostics/global/nh+sh/>)

Diese Graphik stammt vom IPCC-nahen Hadley-Center (GB), und zeigt, daß seit 1998 kein Temperaturanstieg mehr gemessen wird, sondern insgesamt einen abnehmenden Trend, aktuell bis Juli 2012 (...bei zugleich steigendem CO<sub>2</sub>! ...wo ist die Korrelation ??).
