

Die Eisheiligen werden immer kälter

geschrieben von Josef Kowatsch | 18. Mai 2016

Anlass dieser Frage ist die Behauptung des Vorstandes des Deutschen Wetterdienstes (DWD), Andreas Friedrich in der Osnabrücker Zeitung am 21. April 2016: *„...In den vergangenen Jahren haben sich die Eisheiligen eher rar gemacht“*. Meteorologe Andreas Friedrich vom Deutschen Wetterdienst stellt fest: *„In den letzten Jahren zeigten sich diese Kaltlufteinbrüche im Mai weniger...“*

Schon im letzten Jahr hatte Vorstand Friedrich im „Focus“ ähnliches behauptet:

http://www.focus.de/panorama/wetter-aktuell/wetter-aktuell-kein-frost-im-mai-meteorologen-erwarten-heissheilige_id_4665149.html . Durch die Focus-Redakteure wurden die Eisheiligen 2015 einfach zu Heißheiligen gemacht.

Wissenschaftliche Betrachtung der Erwärmungsbehauptungen:

Zunächst sei die Frage erlaubt, was heißt Gegenwart, was heißt in den letzten Jahren? Für den folgenden Artikel definiere ich „Gegenwart“ deshalb selbst: Ab 1998 setzten verstärkt die Katastrophenmeldungen und Vorhersagen über eine unheilvolle Erderwärmung aufgrund eines angeblichen Treibhauseffektes ein. Deshalb werde ich zukünftig solche nichtsagenden Zeitungsangaben naturwissenschaftlich ungebildeter

**Redakteure wie „in jüngster Zeit“
oder „die letzten Jahre“ oder „in
der Gegenwart“ immer das Jahr 1998
als Ausgang für die Betrachtung
ansetzen.**

**Und da Meteorologen 30 Jahre als
Klimaeinheit definierten, soll auch
dieser Zeitraum untersucht werden.
Beginnen wollen wir aber mit 50
Jahren, einem recht langen
Betrachtungszeitraum.**

**Die Eisheiligen
als (angebliches)
eindeutiges Indiz
der Klimaerwärmung**

Wir haben uns die

**Daten der
Klimastation
Potsdam für die
letzten 50 Jahre
besorgt, also von
1966 bis 2016. Im
folgenden Diagramm
sind die 5
Eisheiligentage
(11. – 15. Mai)
aus der
Langzeitreihe der**

**Klimastation von
Potsdam (PIK
Potsdam) mit
Tageswerten
extrahiert und die
fünf Tage im
Schnitt
dargestellt. Und
dieses Jahr 2016
waren die
Eisheiligen in
Potsdam mit 14,3 C**

**im Mittel um
einiges wärmer als
letztes Jahr (12,9
C), was sicherlich
mit der Lage von
Potsdam zu tun
hat. Denn die
Maiabkühlung mit
Regen erfolgte
diesmal aus dem
Südwesten und
erreichte Potsdam**

**später. Schon 200
km weiter südlich
bei der Station
Holzhau im
Erzgebirge betrug
der
Eisheiligungsschnitt
2016 etwa 10C und
war damit kälter
als ein Jahr
zuvor.**
