Bundesverband der Industrie (BDI) ist komplett zu den Klimaalarmisten übergelaufen: Nach der Devise – If you cant beat them join them

geschrieben von WebAdmin | 7. September 2016

Man stelle sich folgende Situation vor: Ein sehr erfolgreicher Unternehmer, sozial eingestellt, seine Mitarbeiter großzügig entlohnend, überdies im Lande alle geforderten Steuern und Abgaben gern evtl. manchmal sicher auch zögerlich, entrichtend und der zudem Bewunderer und großzügiger Förderer einer intakten Umwelt ist, wird von zwei seiner Assistenten gebeten, an einem Konzept mitzuwirken, dass, wenn auch in Schritten, die völlige Stilllegung seines Unternehmens vorsieht. Und nicht nur das, er solle auch – als Vorbild für seine weltweiten Konkurrenten, die später sicherlich nachzögen, das wäre in einem Weltvertrag gerade beschlossen worden- schon mal mit einer umfangreichen Teilstilllegung anfangen. Darüber wolle man jetzt einen Aufruf schreiben, an dem er mitwirken solle, in welchem die ganze Welt dazu aufgefordert wird, es ihm gleich zu tun.

Begründet würde dieser Vorschlag, dass man sicher sei, dass in etwa 100 Jahren durch seine Unternehmen und deren Aktivitäten die Umwelt so leiden würde, dass niemand mehr für ihn arbeiten wolle oder könne. Das hätten nun mal wissenschaftliche Studien, welche die Zukunft auf merkwürdige Weise vorhersehen könnten, gezeigt. Diese dürften auch von niemandem angezweifelt werden, denn sowohl die Wissenschaft, als auch die Regierung hätten ihre Richtigkeit bestätigt.

Was würde der Unternehmer tun? Würde er die beiden – von ihm zudem fürstlich bezahlten Assistenten, die bis dahin für ihn in die Sterne geguckt, oder sich um den Hofgarten gekümmert haben- sofort zum Teufel schicken, oder würde er von ihnen zunächst mal Beweise verlangen? Um sie dann, wenn sie nichts vorweisen können, zum Teufel zu schicken?

Sicherlich würde jeder, der noch einen Rest Verstand besitzt, vermuten, dass der Unternehmer eines von beiden täte.

Doch das ist nicht das, was die Interessenvertretung der deutschen Industrie, verkörpert durch ein Mitglied der Geschäftsführung des Bundesverbandes der deutschen Industrie (BDI) tut. Sie willigt in dieses, für alle höchst schädliche Ansinnen ein und leiht dem Aufruf ihre Stimme und damit Gewicht.

Der BDI fordert den Untergang weiter Teile seiner Mitglieder hierzulande

Denn nun ist es amtlich. Auch der BDI schlägt sich uneingeschränkt auf die Seite derjenigen, die weite Teile der Industrie in diesem Land über die Dekarbonisierung zerstören wollen. Anders ist der am 1. September nur in der Printausgabe der Wochenzeitung „Die Zeit“ erschienene Aufruf „Gebt dem Schmutz einen Preis“ (hier hinter Bezahlschranke) nicht zu verstehen. Als Autoren werden genannt: Holger Lösch; Mitglied der Hauptgeschäftsführung des BDI, Christoph Bals, politischer Geschäftsführer von Germanwatch und Otmar Edenhofer, Stellvertretender Chef des notorischen Potsdam Institut für Klimafolgenforschung (PIK) und Leiter des Mercator Research Institute on Global Commons and Climate Change (MCC) gGmbH.

Im Untertitel des Aufrufes schreiben die Autoren:

Der Ausstoß von CO2 muss kosten. Ein Aufruf von Germanwatch, dem BDI und der Wissenschaft ..

Und weiter ***(Hervorhebungen von mir)***

Wie lässt sich Klimaschutz in Industrie-, Schwellen- und Entwicklungsländern finanzieren? Diese Frage wird ein zentrales Thema für die Weltwirtschaft, deren 20 wichtigste Mächte am Wochenende beim G-20-Gipfel im chinesischen Hangzhou aufeinandertreffen. Und die Antwort darauf liegt auf der Hand: Das beste Instrument für einen ökologisch wirksamen und ökonomisch vertretbaren Klimaschutz wäre ein international abgestimmtes Preissystem für den Ausstoß von Kohlendioxid (CO2)…

….Der Bundesverband der Deutschen

Industrie, Germanwatch und das Mercator Research Institute on Global Commons and Climate Change (MCC) stellen einen gemeinsamen Vorstoß von Industrie, Zivilgesellschaft und Wissenschaft vor.

Wir wollen zeigen, dass sich der scheinbar unversöhnliche Konflikt zwischen Klimaschutz, Wachstum und Wettbewerbsfähigkeit überwinden lässt: durch internationale CO2-Preise.

.. Wir fordern: Die deutsche Präsidentschaft muss nach der Grundsatzeinigung des Pariser Klimagipfels nun die Chance nutzen, in der G 20 weiter gehende Absprachen voranzutreiben….

In den kommenden beiden Jahrzehnten müssen Industrie-, Schwellen- und Entwicklungsländer Abermilliarden

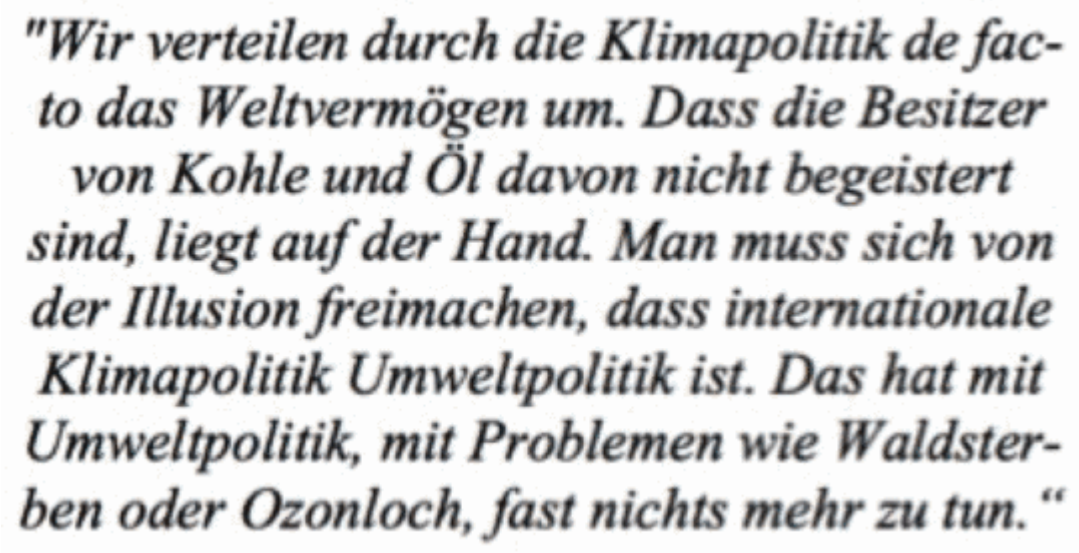
Dollar in den Aufbau und Ausbau von klimaverträglicher Infrastruktur stecken. Für manche geht es vor allem um allgemeinen Zugang zu sauberem Wasser und Strom. Für andere um bessere Verkehrs- und Energieinfrastruktur. Wir meinen: Die Politik kann und muss eindeutige Signale für globalen Klimaschutz setzen – durch weltweit abgestimmte Preise für den Ausstoß von CO2.

Diese Preise sind gleich doppelt sinnvoll. Sie lenken erstens Investitionen. Und zweitens erzeugen sie Einnahmen, um den gigantischen Infrastrukturbedarf zu finanzieren.

.. Weltweite COz-Preise würden Investitionen in Richtung Klimaschutz lenken und Innovationen anstoßen, die Emissionen weiter senken. Zudem würden sie Ländern mit weniger entwickelten Steuersystemen die Chance eröffnen, künftige

Infrastrukturmaßnahmen zu finanzieren – und das sogar schon mit einem zunächst moderaten CO2-Preis. Deutschland sollte seine Führungsrolle in der G 20 nutzen, um mehr Investitionen in den Klimaschutz anzuregen. Der ideale Startpunkt wäre Hangzhou.

Damit lassen die Autoren die Katze aus dem Sack. Es geht ihnen allein um die „Generierung“ von „Abermilliarden Dollar“ also „ Einnahmen, um den gigantischen Infrastrukturbedarf zu finanzieren“.



"Wir verteilen durch die Klimapolitik de facto das Weltvermögen um. Dass die Besitzer von Kohle und Öl davon nicht begeistert sind, liegt auf der Hand. Man muss sich von der Illusion freimachen, dass internationale Klimapolitik Umweltpolitik ist. Das hat mit Umweltpolitik, mit Problemen wie Waldsterben oder Ozonloch, fast nichts mehr zu tun.“

Zitat von O. Edenhofer in der NZZ anlässlich der Klimakonferenz von

Cancun (Details siehe oben rechts)

Diese sollen – nach Abzug der unvermeidlichen und viel Macht verleihenden Umverteilungskosten vorzugsweise via UN-Behörden- von den jetzt schon gebeutelten Verbrauchern der Industrieländer aufgebracht werden und den „Ländern mit weniger entwickelten Steuersystemen“ zugute kommen.

Scheute man sich in der Überschrift schon nicht davor, dass für unser aller Überleben unverzichtbare – aber sonst völlig harmlose Gas CO2 sowie ungiftige, unsichtbare und nur in Mikromengen von rd. 4 Molekülen auf 10.000 Moleküle Luft, in „Schmutz“ umzubenennen, so bezeichnet man auch noch die vielen, vielen unter Korruption, Nepotismus und verbrecherischen Regimen leidenden Drittweltstaaten plötzlich vornehm als „Länder mit weniger

entwickelten Steuersystemen“. Und fordert dazu auf in diese Länder „Abermilliarden Dollar“ zu leiten.

BDI Holger Lösch – Mitglied der Hauptgeschäftsführung- ist mit von der Partie

Und der BDI stimmt nicht nur zu, sondern stellt auch noch einen

der Autoren dieser Schrift. Und, da nichts, aber auch gar nichts von den Unterstellungen, in Bezug auf die merkwürdige Forderung zum „Klimaschutz “, die im Aufruf als Weltübel genannt wurde jemals

bewiesen wurde, sondern ausschließlich in der Glaubenswelt der Autoren begründet ist, lohnt es sich einmal zu überprüfen, wie es denn um die naturwissenschaftliche Kompetenz der

Autoren bestellt ist.

Eines kann man vorab schon mal feststellen: keiner der drei hat naturwissenschaftliche Kompetenzen, weder allgemein, noch in engeren

klimawissenschaftlich relevanten Fächern, wie Geologie, Geographie, Meteorologie oder Physik, Ingenieurwissenschaften oder Chemie. Damit erinnert das Trio fatal an die berüchtigte Ethik-

Kommission, die den unverantwortlichen „Atomausstieg“ begründen half, und ebenfalls frei von jeder Sachkenntnis war, und viele andere Gremien dieser Art, die im Rahmen des System Merkel

über die Köpfe gewählter Abgeordneter hinwegregieren.

Keiner der

Autoren verfügt über naturwiss

enschaftliche Kompetenz – aber

alle über eigensüchtige Motive

BDI Holger

Lösch

Über den BDI Mann Holger

Lösch findet man, dass er von 1983 bis 1992 ein

Studium der Politikwissenschaft, Geschicht

e und Germanistik an der Ludwig-Maximilians-

Universität in München absolvierte. Ob er diese

Studien mit einem Magister abgeschlossen hat, erfahren

wir
nicht.

Wir
erfahren
nur, dass

er schon während seines Studiums „was mit Medien“

machte und als Journalist und Redakteur beim

Bayerischen Rundfunk im Bereich Fernsehen

zu arbeiten begann. Es dort sogar bis zum

die Leiter der Zentralen Programmkoordinati

on schaffte. 2001 wechselte er zur Schörghub

er Unternehmensgruppe in München und hat

sich dort bis zum Geschäftsführer Unternehmensentwic

klung, Kommunikation und Customer Relation Managemen

t der Arabella Hotel-Holding, München hochgearb

eitet.

Seit 2008 ist er beim BDI zunächst

als Leiter Bereich Kommunikation und Marketing

, ab 2009 als Mitglied der Geschäftsleitung

und seit Juli 2011 als Mitglied der Hauptgesc

häftsführung angestellt.

Er gehört

also eindeutig der Zunft, die viele,

zwar
etwas
abfällig
aber
nicht
ganz

falsch, als die schwatzende Zunft bezeichnen, und

darf, wie so viele im Lande, als solcher zu allen

wichtigen Angelegenheiten dieser Welt seine

zwar von jeglicher Sachkenntnis völlig ungetrübt

e, aber sicher geschliffen formulierte

wichtige Meinung äußern.

Soviel

zum Sachverstand des BDI Vertreters
