

Die Ermittlung der EEG-Umlage offenbart die katastrophale Unwirtschaftlichkeit gerade der Windkraft

geschrieben von WebAdmin | 7. Oktober 2016

**Besonders negativ hebt sich hier die
Subventionierung der
unwirtschaftlichen und
Landschaftszerstörerischen Windkraft
hervor:**

Die Betreiber der Windkraftanlagen an Land erhalten 2016 über 5 Milliarden (Mrd.) Euro (5.064.181.821 Euro) Vergütungen für ihren EEG-Strom. Der Erlöste Wert dieses

nicht bedarfsgerecht *) produzierten Stroms an der

Strombörse beträgt jedoch lediglich 225 Millionen (!) (225.092.124 Euro), **also**

**nur 4,4% dessen, was der EEG-
Einspeiser (Windkraft-Industrie bzw.
-Betreiber) erhält.** Die restlichen 95,6% zahlt der

Strombezieher, bzw. Verbraucher über die Stromrechnung. Ein wirtschaftlich katastrophales Ergebnis, das sich auch 2017 in ähnlichen Relationen bewegen wird.

**Würde zum Beispiel ein Landwirt
gleich der Windkraft
„subventioniert“, erhielte er für
den Liter Milch 7 Euro (!), für
den die Milchverarbeitende
Molkerei lediglich**

30 Cent bezahlt, den Rest (6,70 Euro) zahlte der Steuerzahler.

***) Strom aus Windkraft wird nicht bedarfsgerecht produziert, bei Flaute wird gar kein Windstrom produziert und bei Sturm kann der überschüssige Windstrom, aufgrund fehlender Speicher, nicht gespeichert werden. Eine bedarfsgerechte Versorgung ist damit nicht möglich. Kohlekraftwerke laufen deshalb immer im Hintergrund als Schattenkraftwerke mit.**

EEG-Umlage steigt 2017 auf über 7 Cent pro Kilowattstunde

für Stromverbraucher. Nach einer Prognose von Agora Energie
steigt die Umlage auf über 7 Cent pro Kilowattstunde. Schätzungen
liegen bei 7,1 bis 7,3 Cent pro Kilowattstunde Strom.

Das Erneuerbare-Energien-Gesetz (EEG-Umlage) wird nach
Prognose von Agora Energie auf über 7 Cent pro Kilowattstunde
steigen. Die Umlage wird auf 7,1 bis 7,3 Cent pro Kilowattstunde
Börsenstrompreise, teilte die Agora Energie mit.
