

Germany's Green Energy Supply Transformation Has Already Failed!

geschrieben von Pierre Gosselin | 25. Januar 2012

Energy expert Dr. Guenter Keil has closely examined Germany's energy policy of shifting away from nuclear and fossil fuels and over to renewables. What he finds is a bleak picture. Years ago Germany ambitiously embarked on transforming its energy supply system, and hopes to supply at least 80% of its energy needs through renewable energies by 2050, and thus become a moral leader on environmental responsibility for the rest of the world.
