

# Why You Should Support Us!

*EIKE is at the forefront in the battle for freedom and liberty, climate realism, reliable ecological and economically priced energy, free enterprise, and against collectivism.*

*EIKE is connecting scientists, decision makers, activists, and enthusiasts from all over the world. We discuss new scientific findings, energy trends, and solutions that go unregarded by main stream politics and media, but hold great potential for our common wealth.*

*EIKE is battling against short-sighted and unsustainable approaches for our future energy sources, that not only endanger energy security, but also environment and wealth.*

*EIKE is entirely privately funded. We need your support, so we can avert narrow-minded ideological decisions that are endangering wealth and economic power in Germany and in Europe.*

## Advancing Science

*EIKE promotes and distributes peer-reviewed academic papers on climate and energy research, organizes international scientific conferences, and serves as an unideological forum for climate and energy facts. Our members are appraised scientists and academics who know their professions and provide their expertise.*

## Shaping Politics

*EIKE is active in connecting decision makers and the scientific community. We aspire to informing the general public about climate and energy facts so this knowledge will be transported into politics in order to provide valuable solutions for a future free from political ideologies.*

## Promoting Freedom

*EIKE is a privately owned, independent, and non-profit organization, that is charitable under German law. We envisage a society free from today's biased so-called climate science that is paving the way for restrictive laws which curtail civil rights and dramatically revise fiscal and energy policies.*

## Critical Thinking

*EIKE fights for judging energy sources based on their economic efficiency, their reliability and security, and their sustainability. We want an energy future that is affordable for all and friendly to the environment at the same time – not destructive to nature and impoverishing the people, just for climate reasons.*
